

**Amendments to the Claims**

Claims 1-13. (Canceled)

14. (New) Articulated wiper arm of a wiper apparatus for windows of motor vehicles, having on a free end a device for detachably and pivotably connecting to a wiper blade, in particular for connecting to a non-articulated wiper blade, the device for connecting to the wiper blade being fixed to the wiper arm and comprising

an articulating bolt for pivotably carrying the wiper blade, and  
a safety hook for partially gripping around the wiper blade in an operating position thereof,

wherein the safety hook is a bent section of the free end of the wiper arm beyond the position of the articulating bolt.

15. (New) A wiper arm according to Claim 14 wherein the articulated bolt is glued, welded or pressed to the wiper arm.

16. (New) A wiper arm according to Claim 14 wherein the wiper arm is formed of a flat material that is twisted around its longitudinal axis in sections.

17. (New) A wiper arm according to 14 wherein the free end with the articulated bolt is twisted around its longitudinal axis by an angle between 0 degrees and 90 degrees vis-à-vis a carrying area near a swivel support of the wiper arm.

18. (New) A wiper arm according to Claim 14 wherein the free end with the articulated bolt is twisted around its longitudinal axis by approximately 90 degrees vis-à-vis a carrying area near a swivel support of the wiper arm.

19. (New) A wiper arm according to Claim 14 wherein a connecting section between a carrying area and the free end has a longitudinal axis and is twisted vis-à-vis the carrying area and the free end and around the longitudinal axis by an angle of between 0 degrees and 90 degrees.

20. (New) A wiper arm according to Claim 14 wherein a connecting section between a carrying area and the free end has a longitudinal axis and is twisted vis-à-vis the carrying area and the free end and around the longitudinal axis by approximately 45 degrees.

21. (New) A wiper arm according to Claim 14 wherein the device for connection to the wiper blade features a covering that partially grips around this wiper blade and that can be locked with the wiper arm.

22. (New) A wiper arm according to Claim 14 wherein in an operating position, the wiper blade is locked on the wiper arm and is restricted in terms of its swivel range vis-à-vis said wiper arm.

23. (New) A windshield wiper assembly comprising:  
an articulated wiper arm having a free end;  
a wiper blade; and  
a device for detachably and pivotably connecting the wiper arm and the wiper blade, the device being fixed to the wiper arm and including an articulating bolt pivotably carrying the wiper blade, and a safety hook partially gripping around the wiper blade in an operating position thereof, the safety hook being a bent section of the free end of the wiper arm.

24. (New) The assembly of Claim 23 wherein the safety hook is beyond the position of the articulating bolt.

25. (New) The assembly of Claim 23 wherein the articulated bolt is glued, welded or pressed to the wiper arm.

26. (New) The assembly of Claim 23 wherein the wiper arm is formed of a flat material that is twisted around its longitudinal axis in sections.

27. (New) The assembly of Claim 23 wherein the free end with the articulated bolt is twisted around its longitudinal axis by an angle between 0 degrees and 90 degrees vis-à-vis a carrying area near a swivel support of the wiper arm.

28. (New) The assembly of Claim 23 wherein the free end with the articulated bolt is twisted around its longitudinal axis by approximately 90 degrees vis-à-vis a carrying area near a swivel support of the wiper arm.

29. (New) The assembly of Claim 23 wherein a connecting section between a carrying area and the free end has a longitudinal axis and is twisted vis-à-vis the carrying area and the free end and around the longitudinal axis by an angle of between 0 degrees and 90 degrees.

30. (New) The assembly of Claim 23 wherein a connecting section between a carrying area and the free end has a longitudinal axis and is twisted vis-à-vis the carrying area and the free end and around the longitudinal axis by approximately 45 degrees.

31. (New) The assembly of Claim 23 wherein the device for connection to the wiper blade features a covering that partially grips around this wiper blade and that can be locked with the wiper arm.

32. (New) The assembly of Claim 23 wherein in an operating position, the wiper blade is locked on the wiper arm and is restricted in terms of its swivel range vis-à-vis said wiper arm.
